

Teaching Plan - PhD AMBE – XL ciclo

The curriculum has been structured to provide comprehensive and in-depth training in the various skills necessary to conduct high-quality research. The division of courses aims to cover the main training areas required for a doctoral student. The primary goal of the program is to equip students with the necessary foundations to conduct high-quality research, initially under the guidance of a supervisor and subsequently independently. This is achieved through a combination of:

1. **Core Courses:** These courses provide fundamental skills for the entire research journey, including the development of research proposals, academic writing and ethics, epistemology and philosophy of science, oral presentation techniques, and innovative teaching methodologies.
2. **Research Methods Courses:** Students gain a solid foundation in research methodologies, essential for developing and conducting original research projects.
3. **Disciplinary Specialization Courses:** Specialized courses allow students to deepen their knowledge in their specific field, preparing them to make significant contributions to the advancement of knowledge in their area.
